

Rapidly create, test and share Depositional Concepts based on parameterised analogues from either private or third-party databases.

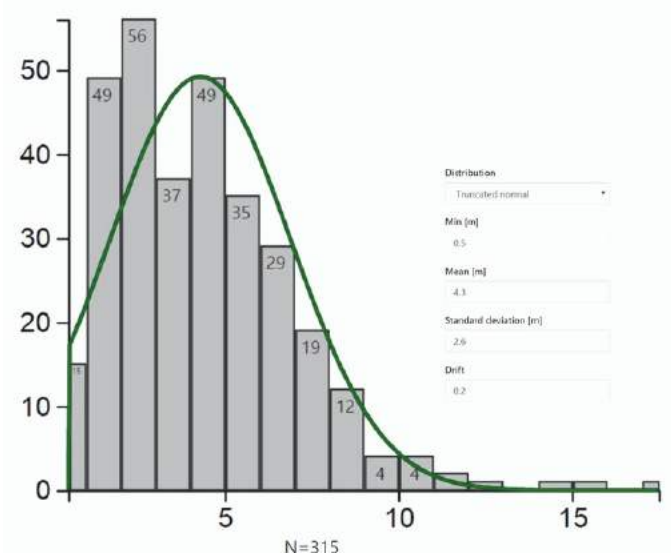

STEP 01 EXPLORE

Analogue databases delivered via geologically relevant intuitive interfaces, designed for non-specialists.

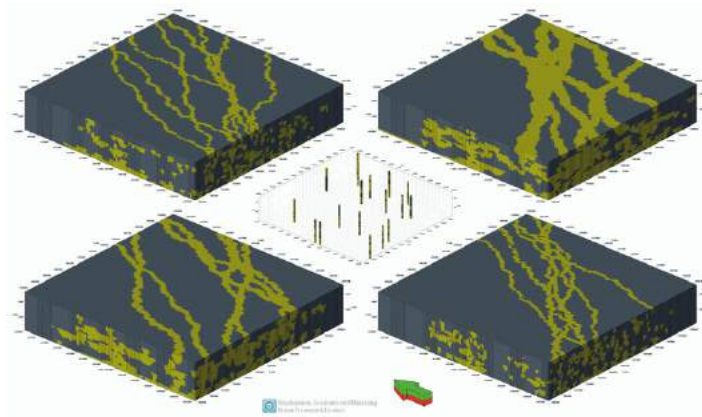

STEP 02 TRANSFORM

Analogue quickly into facies parameters used by advanced algorithms.

STEP 03 EXECUTE

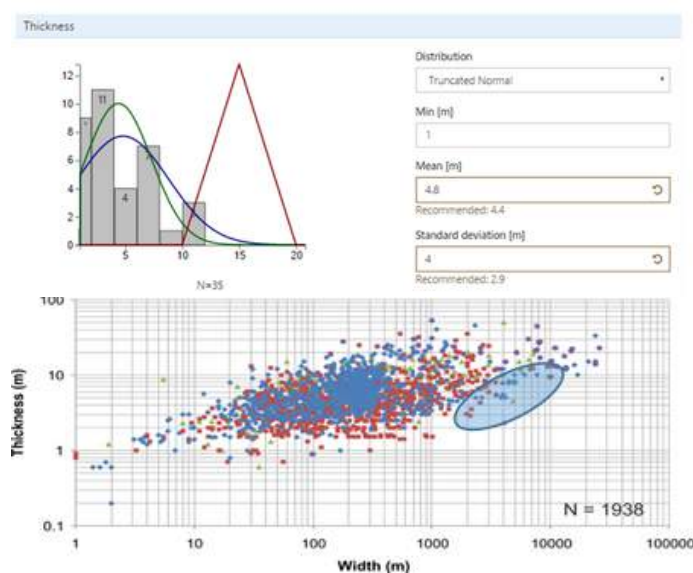

Direct two-way connections to Petrel* E&P software platform and other common reservoir modelling packages.

*Mark of Schlumberger

STEP 04 ASSURE

Quality consistency by comparing pre-existing geomodels against 100s of high-quality analogues.

STEP 05 SHARE

Depositional Concepts with supervisors and peers for validation through automated workflows.
